12 Questions to Ask Yourself About Your Legacy PLM

Just like retail, software is always changing and evolving. Is the technology you invested in a few years ago still delivering as expected today? As the leading digital solution provider for retailers around the world, we've created a checklist to identify if it is time to rethink your PLM.

1. Are your teams working outside of your current solutions?

2. Does PLM training for new employees take days (or weeks)?

3. Have you had to customize your solutions to work around their shortcomings?

4. Do your customizations make your path to upgrade expensive and painful?

5. Have you upgraded to a new release in the past 3 years? Why not?

6. Is your current solution focused on your industry and industry needs?

7. Has your solution evolved to cover your changing needs since you selected it?

8. Are you fully managing the information flows and processes mapped out in the project with ease?

9. Does your tech seamlessly integrate existing systems including your e-com, ERP, 2D/3D systems and more?

10. Do you require expensive service days for any customization required in the system?

11. Are you able to provide feedback and contribute to your PLM partner's product roadmap?

12. Finally: are your teams happy working your current PLM?

Centric PLM is the leading Product Lifecycle Management platform for **10,000+ brands**
